

Creating new jobs for java-maven project in Jenkins:

1. Click on dashboard in jenkins

The screenshot shows the Jenkins Dashboard. The top navigation bar includes the Jenkins logo, a search bar, and user information (admin). The left sidebar lists various dashboard items like 'New Item', 'People', 'Build History', etc. The main content area displays a table of existing jobs.

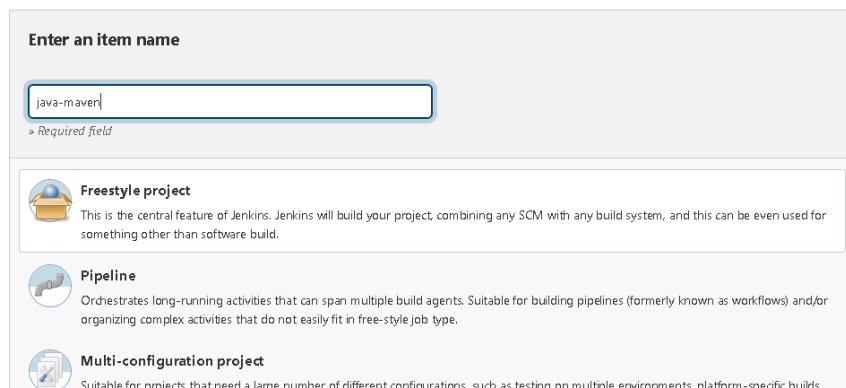

S	W	Name	Last Success	Last Failure	Last Duration
✓	🔗	javamaven	18 days #15	26 days #7	14 sec
✓	☁	javaproject	18 days #8	18 days #7	14 sec
⋯	🔗	jenkinsmaven	N/A	N/A	N/A
⋯	🔗	lion	N/A	N/A	N/A

2. Then click on new item

3. Then select freestyle project and enter item name, then click ok

The screenshot shows the Jenkins Dashboard with the breadcrumb 'Dashboard > All'. The 'New Item' button is visible in the top right corner.

The screenshot shows the 'Enter an item name' form in Jenkins. The item name 'java-maven' is entered in the text field. Below the form, there are three options: 'Freestyle project', 'Pipeline', and 'Multi-configuration project'. The 'Freestyle project' option is selected.

Enter an item name

java-maven
» Required field

Freestyle project
This is the central feature of Jenkins. Jenkins will build your project, combining any SCM with any build system, and this can be even used for something other than software build.

Pipeline
Orchestrates long-running activities that can span multiple build agents. Suitable for building pipelines (formerly known as workflows) and/or organizing complex activities that do not easily fit in free-style job type.

Multi-configuration project
Suitable for projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds.

4. In general tab, write description like java-maven project, then click on save

The screenshot shows the 'General' tab of the Jenkins job configuration page. The 'Description' field contains the text 'java-maven project'. Below the description field, there are several checkboxes for project settings.

General | Source Code Management | Build Triggers | Build Environment | Build | Post-build Actions

Description

java-maven project
[Plain text] Preview

☐ Discard old builds ?

☐ GitHub project

☐ This project is parameterised ?

☐ Throttle builds ?

5. In source code management tab select git fill the repository url and credentials of github repository url, then click on save

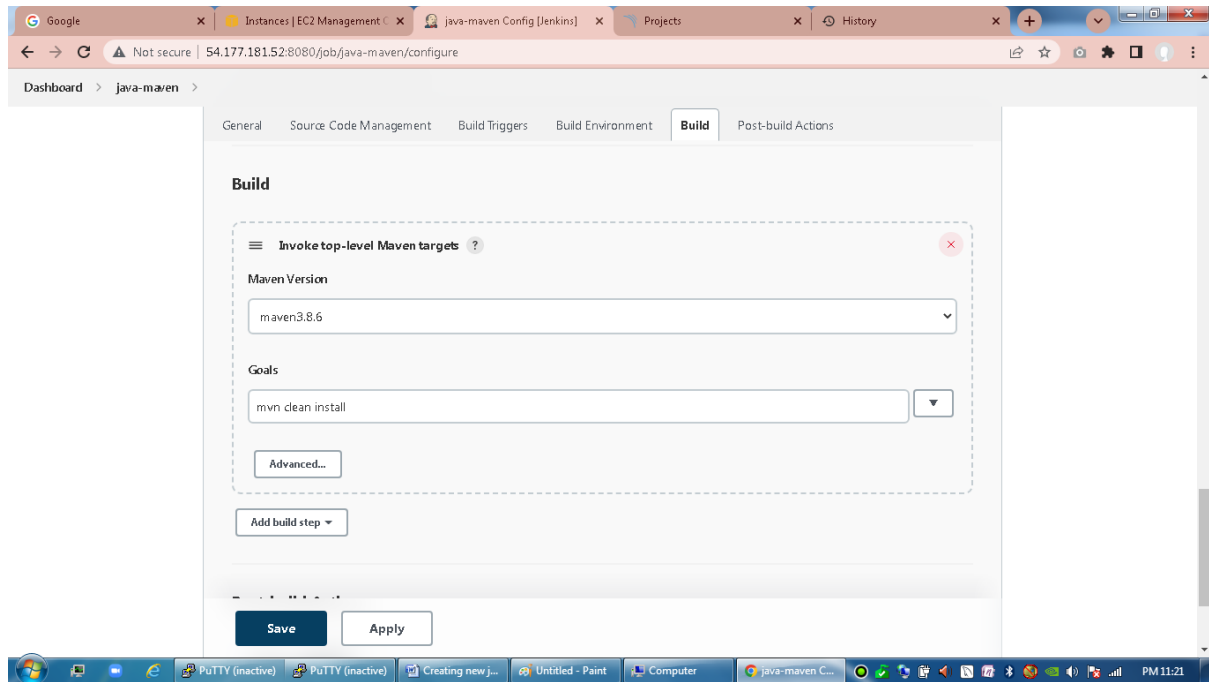

6. In source code management tab select branches to build an */master, then click on save

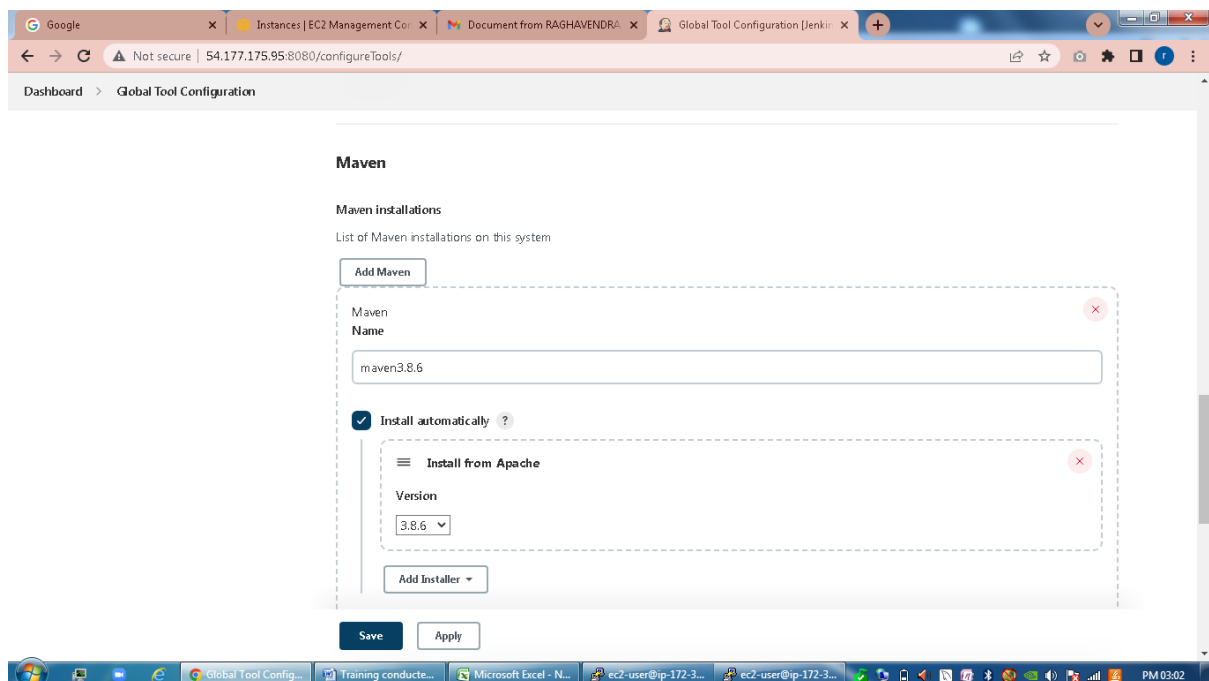

7. In build tab select invoke top level maven target

8. In build tab , select maven version maven3.8.6 and in goals put mvn clean install, then click on save

For maven installation goto global tool configuration. In maven installation click on add maven button do as shown in following figure

9. After save click on build now in left panel.

**Jenkins**

Search

 3 2adminlog out

Dashboard > java-maven >

↑ Back to Dashboard
